

# Interior Design Website - VIVA DECOR

## Project Documentation

### • Overview

This project is a responsive Interior Design Website UI, named as **Viva Decor** built using HTML and CSS, based on the Figma design. The website is designed to showcase modern interior designs with an elegant and user-friendly interface.

### • Technologies Used

- HTML5: For structuring the web pages.
- CSS3: For styling and layout.
- Flexbox & Grid: For responsive design.
- Media Queries: For optimizing the design across different screen sizes.

### • Features

- Responsive Layout: Adapts to various screen sizes (mobile, tablet, desktop).
- Modern UI Design: Clean and professional look based on the Figma template.
- Navigation Bar: Fully functional and responsive.
- Hero Section: Eye-catching introduction with images and text.

- Services Section: Displays different interior design services.
- Testimonial Section: User's feedback, what customers says about your work.
- Newsletter Section: Where user's can get the emails about new updates.

## • File Structure

### /Project-Folder

- | — index.html (Main HTML file)
- | — css/ (Main CSS file)
  - | — styles.css
  - | — responsive.css
- | — images/ (Folder for images)

## • Future Enhancements

- Adding animations and transitions.
- Implementing JavaScript for interactive elements.
- Creating and connecting the contact form with a backend service.

## • Conclusion

This project is a well-structured, visually appealing Interior Design Website that effectively follows the Figma design. It is a great demonstration of HTML and CSS skills with responsive design principles.

# Interior Design
